

ATCO Power is a part of the ATCO Group of Companies. ATCO Group, with more than 8,000 employees and assets of approximately \$12 billion, delivers service excellence and innovative business solutions worldwide with leading companies engaged in Utilities (pipelines, natural gas and electricity transmission and distribution), Energy (power generation, natural gas gathering, processing, storage and liquids extraction), Structures & Logistics (manufacturing, logistics and noise abatement) and Technologies (business systems solutions).

ATCO Power is a world-class developer, construction manager, owner and operator of technologically advanced and environmentally progressive independent power generation plants.

ATCO operates 19 power plants with a combined capacity of approximately 5,000 megawatts (MW), 16 by ATCO Power in Canada and the United Kingdom and three in Australia by ATCO Australia.

ATCO Power's two largest thermal generating stations are located in central Alberta. The **670 MW Battle River Generating Station** has provided reliable, cost effective power for Alberta growth since 1969. The **760 MW Sheerness Generating Station**, located near Hanna, Alberta, was originally commissioned in 1986. The output from both these plants is sold under long-term power purchase arrangements.

ATCO Power's other major assets are independent power generation plants:

- > **Scotford Cogeneration Plant [170 MW]** supplies steam and power to the Scotford Upgrader near Fort Saskatchewan, Alberta.
- > **Muskeg River Cogeneration Plant [170 MW]** supplies steam and power to the Muskeg River Mine near Fort McMurray, Alberta.

- > **Joffre Cogeneration Plant [480 MW]** supports NOVA Chemicals with power and steam at their Joffre petrochemical site in Alberta.
- > **Cory Cogeneration Plant [260 MW]** near Saskatoon, Saskatchewan supplies steam to the Potash Corporation of Saskatchewan and electricity to SaskPower Corporation.
- > **Brighton Beach Generating Station [580 MW, natural gas-fired]** in Windsor, Ontario sells all output from the plant under a long-term energy conversion agreement with Coral Energy Canada, an affiliate of Shell Trading.
- > **Barking Combined-Cycle Generating Plant [1,000 MW, natural gas-fired]** near east London is the company's principal asset in the U.K. ATCO Power operates the plant through its Thames Power subsidiary.

ATCO Power owns and operates several other assets including the **32 MW Oldman Hydroelectric Plant** that ATCO Power and the Piikani Nation jointly own. The environmentally friendly facility is located in southern Alberta and can produce enough power for 25,000 households.

ASHCOR Technologies markets coal combustion products from ATCO Power's coal-fired generating stations in Alberta.

Siegfried Kiefer Chief Operating Officer, Energy & Utilities

John Eil President

Carl Fuchshuber Vice President, Commercial & Strategic Planning

Michael Jones Vice President, ATCO Power Generation, United Kingdom

Gord McPhee Vice President, Commercial

Paul Wright Vice President, Finance

Bob Piro Vice President, Operations Canada

Anders Renborg Vice President, Asset Optimization

Doug Tenney Vice President, Hydro Development

Kathy Drever Vice President, Corporate Communications & Special Projects

Joe Schnitzer President, ASHCOR Technologies Ltd.
